

EXHIBIT # 11

**CITY OF LAKE FOREST PARK  
DETERMINATION OF NONSIGNIFICANCE (DNS)  
WAC 197-11-355**

**Description of proposal:** The project will replace and upgrade a structurally deficient and partial fish barrier 96"x76"elliptical structural steel culvert with a new 70-foot long fish passable pre cast concrete box culvert and wing walls. Culvert design will adhere to the stream simulation culvert design option. Work will include excavation of the road prism, utility protection or relocation, transportation improvements, erosion and sediment control, fish exclusion and stream bypass, and widening of the channel bankfull width within the project limits. Project limits will include areas outside the existing right of way. The road section will be restored and improved to meet pedestrian (ADA) and vehicle use. Graded channel bed sediment suitable for fish will be placed in the new culvert, which will be countersunk to a depth of 30% of culvert rise. Areas above the ordinary high water mark (OHWM) elevation that are disturbed by the work will be restored with native vegetation. Wetlands are present downstream of the culvert, but will not be impacted.
